

Securing Industrial Distribution Property

With a growing reputation for highly professional service excellence, GSS are at the forefront of a totally new and unrivalled concept in security systems design and risk management

A concept developed as a solution to the threats and management challenges faced by today's 'Shed' development companies.

The GSS, BS8418 event activated, remotely monitored CCTV systems are designed to monitor, digitally record and where required, action a response.

Currently protecting a number of properties for the world's largest owner, manager and developer of industrial distribution facilities, GSS solutions have shown to offer real cost saving benefits, 24/7 security and a high degree of flexibility and reliability over manned guarding solutions.

- Perimeter Alarm Detection.
- CCTV Alarm Verification
- Voice annunciation, audio systems inform intruders of their detection.
- Integrated access and barrier control for additional site management solutions.
- Health & Safety monitoring and management.
- Cost saving benefits.
- Added value - systems can be either relocated or left in situ for future tenant requirements.
