

Guide Security Services Ltd (GSS) are a leading UK based Integrated Security Solutions provider, at the forefront of security systems design and risk management.

With a proven track record in public and private sector, Critical National Infrastructure projects; our experience ranges from power station and utility locations, communication and distribution networks, through to critical datacentre facilities.

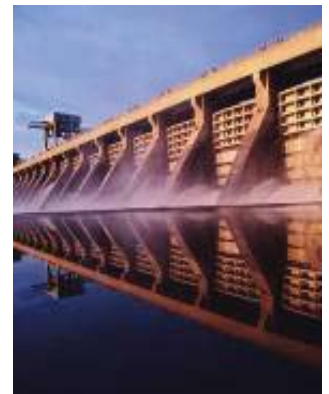

Our focus is entirely on the individual needs of our client to enable increased operational efficiency, enhance business performance, whilst securing critical infrastructure, property and lives.

Detailed research and analysis, determines the security and safety needs of each individual business. We identify and protect the security risks at any given time for premises, personnel and security sensitive environments.

Using industry leading IT and security technologies GSS specialise in the design and installation of IP based security and video surveillance solutions. Our systems are designed to capture, distribute, analyse, manage, store and report upon the video information obtained, whilst where possible providing 'seamless' integration into other existing business and security systems.

The security implications for organisations are becoming increasingly important, through the utilisation of IT storage and IP network infrastructure, GSS can provide a compatible, convergent and scalable integrated security solution helping clients manage their corporate risk both locally and internationally.
