

Guide Security Services Ltd

Remote Monitoring Solutions

CCTV is a proven deterrent in helping protect people, property and assets. Research shows that most security systems are not being used effectively.

The GSS RVRC also has the facility to issue audible warnings to inform intruders of their detection and should the need arise, provide live audio commentary to the police or security personnel in the event of an incident.

Our alarm video verification procedures mean our clients will never be alerted unnecessarily by nuisance alarms.

Remote monitoring can offer complete Communication and Management Solutions, from single camera applications to full site interaction, GSS monitoring services can make your system work for you.
